Laboratory note: The estimated concentration of the unknown peak in the sample is 12.67% [Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)88-THE or d9-THC. At this time there are no reference standards available for (+)48-THC is a different compound from the main (-)48-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)48-THC is a different efficacies.
